

OIS adds skin cancer treatment system to portfolio

Oncology Imaging Systems Ltd. is introducing a new superficial radiotherapy system for the treatment of skin cancer this year, manufactured by TOPEX Inc. The TOPEX SRT 100™ System has been specifically designed to meet the increasing number of skin cancer cases diagnosed each year, offering a superior non-surgical treatment. The system received US FDA market clearance in early 2007 and has already won a top award for its highly successful product innovation.

The TOPEX SRT 100™ System is a compact, mobile, productive and cost effective solution for the non-surgical treatment of skin cancer. Created in consultation with the medical community, this system has a footprint of just 30" x 30"; it uses standard wall socket operation and offers automated set-up controls and modular component electrical assembly platforms. There is a unique pre-treatment RAD check to verify dose delivery before the patient is treated, automatic X-ray tube warm-up and automatic Al filter change, precise dose delivery through a tube focal spot of 1mm x 1 mm and replaceable visual applicator safety contact shields.

This compact but flexible mobile design has a broad range of motion (both horizontal and vertical) to allow the patient to be treated either sitting or lying down, especially comforting for older people and those with restricted mobility. The reduction of set-up procedures, ease of use and reduced installation and operational costs, provides maximum system up-time and greatly improves a clinic's productivity and scheduling, whilst providing all patients with a considerably better, broader and more efficient treatment method.

"We're really excited about this new product" said Steve Imber, Managing Director of Oncology Imaging Systems Ltd. "No-one can argue with the increased out-put and low capital investment this system offers. The huge benefit for everyone – patient, clinic and physician – makes it one of the best skin cancer radiotherapy solutions on the market today."

For more information on the TOPEX SRT 100™ System and all other patient positioning and immobilisation devices, please contact Oncology Imaging Systems Ltd., tel. 01825 744 063 fax. 01825 749 557 sales@oncologyimaging.com www.oncologyimaging.com
