

PointGuards® for Kids

Oncology Imaging Systems to distribute a new line of temporary paediatric tattoo covers

Oncology Imaging Systems is pleased to introduce a PointGuard® adhesive cover option for paediatric radiation therapy treatment, from Beekley Corporation in the USA.

These bright and fun designs are the first child-friendly covers on the market. Perfect for protecting and highlighting temporary marks during radiation therapy, they make marking a lot less scary for the little ones. The child-friendly pictures help create a more positive experience and make kids much more likely to keep them on.

Beekley PointGuards® for Kids are 3.5cm in diameter with a clear centre for maximum visibility. They provide a watertight seal and stay securely in place for up to 4 weeks, ensuring day-to-day reproducibility of set-ups. There is no cutting and no waste; they are quick and easy to apply, saving up to 5 minutes during a 3 point set up. Available in either ***Butterfly*** or ***Dinosaur*** design, PointGuards® for Kids are hypoallergenic and latex free, clinically proven to be less irritating to skin than other tape methods.

Beekley PointGuards® also come in a plain version (for grown ups) with a see-through cover for quicker and more precise placement. They are available in two sizes; 2.5cm circular covers for smaller treatment planning marks or 1.5cm x 5.0cm linear adhesive covers for longer, more linear treatment planning marks.

For more information on PointGuards® for Kids and all other Beekley skin markers and breast biopsy systems, please contact Oncology Imaging Systems Ltd., tel. 01825 744 063 fax. 01825 749 557 sales@oncologyimaging.com www.oncologyimaging.com
