

**TOPEX mobile unit reaches 3,000 skin cancer patients worldwide**

Oncology Imaging Systems Ltd. is the UK and Ireland distributor for TOPEX Inc. **TOPEX SRT 100** effectively treats skin cancer through superficial radiotherapy. The compact but flexible design has a broad range of motion (both horizontal and vertical) to allow the patient to be treated either sitting or lying down, especially comfortable for older people and those with restricted motion. The unit is self-contained with standard wall socket operation and automated set-up controls. It offers a mobile, productive and cost-effective solution for clinics, with increased out-put and low capital investment.

The procedure is accurate, safe and pain free – the use of anaesthetics is not required and the need for skin grafting is eliminated. This method is extremely beneficial to patients that cannot tolerate general anaesthesia and for those that need blood thinning medications which have contraindications for reconstructive surgery.

Since its introduction in 2007, the TOPEX system has treated over 3,000 patients in the United States, Europe, South Africa & Australia. The system is also now being used in two US Veterinary Oncology Centres which is a very exciting step forward. It is estimated that these key reference sites can perform treatments on 50%-60% of the small animal patient base that are normally referred out to radiation treatment centres.

**For more information on the TOPEX SRT 100 system and all other patient positioning devices, please contact Oncology Imaging Systems Ltd., tel. 01825 744 063 fax. 01825 749 557 [sales@oncologyimaging.com](mailto:sales@oncologyimaging.com) [www.oncologyimaging.com](http://www.oncologyimaging.com)**
